

Ubuntu 18.04 – Instructions for Docker Installation:

Check Ubuntu version

>lsb_release -a

Update all Libraries (First time)

>sudo apt-get update

Install Docker

>sudo apt-get install docker.io

Add current user to docker group

>sudo usermod -aG docker \$USER

Logout & log back in or run the following command to activate changes to the docker group

>newgrp docker

Check if docker is up & running

>docker version

Check status of docker daemon

>sudo systemctl status docker

Type 'q' to get out of terminal

In case docker daemon is not started, start it using command

>sudo systemctl start docker
